

Stage II Vapor Recovery Testing

Vapor recovery is an effective control technology to reduce the gasoline vapor emissions into the air from volatile organic compounds (VOCs) and hazardous air pollutants (HAPs) from vehicle fueling sites or gas stations.

OUR SERVICES INCLUDE:

- Pressure Decay Testing
- Dynamic Back Pressure Air/Volume to Liquid Ratio
- Flow Rate Determination
- Liquid Removal Device
- Healy EVR/ORVR Phase II Systems
- Phase I EVR Testing & Inspection
- P/V Vent Cap
- Static Torque
- Drop Tube Integrity

Tanknology will determine the requirements in your area, per California Air Resource Board (CARB) executive orders and/or the local implementing agency. The testing will be scheduled as required to maintain compliance with the current regulations, including Enhanced Vapor Recovery (EVR) and Onboard Refueling Vapor Recovery (ORVR) requirements.

Compliance

All UST operators are required to have trained service personnel periodically evaluate vapor recovery systems and equipment to insure it is functioning according to equipment manufacturers specifications and complying with local regulatory requirements. Tanknology offers a full range of system testing services for the underground storage tank operator to meet state environmental requirements.

On-Line Results

Test results captured on site by our service technician are transmitted via the Internet to our Austin, TX headquarters; results are mailed shortly thereafter. Results are available on-line, 24 hours a day, 7 days a week, by utilizing Tanknology's Web Report Access Program (WRAP), a free service exclusive to Tanknology's customers.

Advantages

As the nations largest compliance service provider, Tanknology follows all CARB test procedures and Executive Orders as well as various state implementation plans to keep sites in compliance with air quality regulations. As a nationwide service provider, a technician is always near by. Tanknology can also perform minor system maintenance on the spot, saving on call to a second service provider. Our fleet of vehicles are equipped with state-of-the-art testing technologies, ensuring that our technicians provide accurate, reliable results with minimal disruption to business.
