

# Tank, Line & Leak Detector Testing

## TECHNICAL SPECIFICATIONS

### TLD-1 Line Test, Certified for:

- Rigid piping certified up to 172 gal.
- Flexible piping certified up to 119 gal.

### VacuTect™:

- Patented vacuum technology
- Tank certified up to 75,000 gal.
- Detection probability = 100%
- False alarm probability = 0%

### Leak Detector Test, Field Test Apparatus (FTA):

- Calibrated to detect 3gph leak @ 10psi
- Built to Red Jacket Specifications

***In the ongoing battle to reduce environmental risk, the owner of an underground storage tank (UST) has one extremely important tool: Testing.***

Whether testing for a suspected leak or for the sale of property, Tanknology can test the entire UST system, including tanks, lines and leak detectors, and ensure accurate results with minimal disruption to business. Our nationwide fleet of vehicles carry commonly used replacement parts, allowing technicians to perform minor maintenance on the spot, eliminating the need to call a second service provider.

## ***Certified Testing Technologies***

Tanknology's third party certified, exclusive VacuTect™ and SureTest™ tank testing methods have been reviewed by the National Work Group on Leak Detection. VacuTect was the first vacuum based system and has the ability to detect a leak of 0.05gph in as little as 15 minutes. Because Tanknology's methods work with a variety of petroleum products and various levels of fuel, they often eliminate the need to schedule product delivery before testing.

## ***On-Line Test Results***

Test results recorded on-site by our service technician are transmitted via the Internet to our headquarters in Austin, Texas where the reading and report is generated and mailed. If needed sooner, the test results can be accessed on-line, 24 hours a day, 7 days a week, by utilizing Tanknology's exclusive Web Report Access Program (WRAP), a complimentary service exclusive to Tanknology customers.

## ***Qualified Nationwide Service Crew***

By employing the best trained nationwide service crew in the petroleum industry and using our emergency response service (24 hours a day, 7 days a week), there is peace of mind knowing that Tanknology is here to take care of testing needs no matter when or where they occur.
