An Economical Way To See What’s Happening Inside Your Tanks

Problems inside a UST like corrosion, cracking, blistering, de-lamination – issues that compromise your fuel and could lead to catastrophic consequences to your site – are notoriously hard to pinpoint. Getting a good clear look at what’s happening inside the tank is difficult and expensive.

The TankCam Inspection from Tanknology is the solution to that problem.

TankCam Inspections provide a quick and cost-effective, yet very detailed, look inside your tank. Using state-of-the-art remote video technology and a certified Tanknology technician, the TankCam Inspection helps you clearly see structural or lining problems such as cracking, blistering, de-lamination or corrosion that is creating problems with fueling and potentially exposing you to a significant leak from your tank.

TankCam Inspections can also be used to pinpoint the cause of a failed tightness test, verify conditions after a tank cleaning, locate unused riser openings, verify overfill protection, visually inspect fuel conditions – virtually anything you want to see inside your UST. And no fuel removal or excavation is required.

The inspection results in a DVD video record which details everything the technician saw in the inspection.

TankCam can also be coupled with Tanknology’s multiple tank-washing methods for the most thorough cleaning available anywhere.

TankCam is Patent Pending.
