

Press Release

Tanknology Launches Fuel and Tank Quality Services Division

Austin, TX - Tanknology Inc. the world's largest provider of environmental compliance testing and inspection services, has announced the formation of a new division that will address the growing demand for cleaning diesel tanks and filtering diesel fuel in the United States.

The *FuelPure* Fuel Filtration System eliminates contaminants, sediment and water from fuel by utilizing a proprietary graduated, four-stage filtering system. Tanknology was one of the first companies in the industry to enter the fuel polishing market, when it purchased the technology in 1996. Since that time, FuelPure has grown to be the most trusted fuel polishing technology in use in the United States.

Tanknology's *TankClean* Remote Video UST Cleaning System is the only video-guided cleaning system in the industry and uses Tanknology's proprietary TankCam® video inspection camera to directionally clean the interior of underground storage tanks. First introduced in 2011, the process utilizes a directed high-pressure rinse, aided by the TankCam which is remotely operated by a technician, providing video documentation of the entire cleaning process.

Tanknology's *DieselCheck* Program gives tank owners a glimpse into the health of stored fuel by utilizing proprietary sampling methods to collect periodic fuel samples from single or multiple points in aboveground or belowground diesel storage tanks.

John Harris will lead the newly formed Fuel and Tank Quality Services Division, that will utilize the industry leading TankClean™ Remote Video UST Cleaning System, FuelPure Fuel Filtration System and DieselCheck™ Inspection Program.

"Tanknology is uniquely positioned to provide solutions to owner/operators dependent on high quality diesel," said Allen Porter, Tanknology CEO. "We have over 20 years of fuel polishing experience with nationwide coverage provided by trained technicians."

"As a separate division the singular focus is provide best in class service on both a preventative and reactive basis. We are pleased that John Harris will head the division, as he understands the challenges, has a customer-centric focus and the former Vice President for the Southeast Region, he has the operational experience to make the division a success."

Harris can be reached at (864) 706-7018 or via email at jharris@tanknology.com.

About Tanknology

Tanknology Inc. the world's largest provider of environmental compliance testing and inspection services, provides environmental compliance testing and inspection services at more than 50,000 petroleum fueling and storage facilities per year. Tanknology offers more than 30 compliance-related service offerings and holds 22 patents for leak detection and tank monitoring technology. Internationally, Tanknology licensees span more than 20 countries, providing services to the largest petroleum operators in the world.
