

America's Leader in Compliance Testing Solutions

Tanknology is the largest integrated provider of petroleum system compliance solutions in the United States. Our crews provide testing and related services for customers of all sizes, in every corner of the country. Since our founding in 1988, we have tested over two million tanks. We currently manage site compliance needs, tank inspections, fuel testing and polishing for more than 85,000 sites each year, while performing more than 5,000 monthly inspections on facilities from coast to coast.

As the national leader in tank testing and petroleum site compliance, our services span both the Underground (UST) and Aboveground (AST) storage tank markets through our seven regional operations offices that blanket the United States with local regulatory specialists. Outside of the United States, international Tanknology licensees provide services in more than 20 countries.

Tanknology boasts a team of the industry's most qualified experts. When it comes to fueling site compliance, no company in the world can match the breadth and depth of our expertise. Our associates have at their disposal the broadest array of compliance-related services, with the most innovative line of proprietary technologies in the world.

Overview of Services

Tank, Line and Leak Detector Compliance Testing

Tanknology provides quick, accurate and cost effective tank, line and leak detector testing with minimal disruption to facility operations. Our VacuTect™ UST testing system performs a test on a tank and associated piping in less than an hour in most cases, on tanks with product levels ranging from 5% to 95% full.

Stage II Vapor Recovery System Testing

Our full range of Stage II vapor recovery system testing services include pressure decay testing, dynamic back pressure, air-to-liquid ratio, pressure/vacuum vent cap testing, flow rate determination, and liquid removal.

Secondary Containment Testing

Tanknology's patented secondary containment testing system detects leaks of 0.05 GPH within 15 minutes. Our proprietary hydrostatic sump testing system provides for quick evaluation at each sump or dispenser pan in a cost-effective method that requires minimal site downtime.

Spill Bucket Testing

Our proprietary spill bucket testing technology provides accurate spill containment test results without impacting site operations. Plus, Tanknology's method does not generate hazardous waste by-products that require special handling.

FuelPure™ Fuel Filtration Service

Our FuelPure Fuel Filtration Service rapidly filters fuel, removing contaminants throughout the tank, resulting in clean fuel, optimal system flow, lower system maintenance costs and improved overall system performance. Process modifications provide water and debris removal, often required when converting to ethanol-based fuels.

TankCam™ Video Inspection

TankCam Inspections provide a quick and cost-effective, yet very detailed, look inside your tank. Using our state-of-the-art remote video technology and a certified Tanknology technician, the TankCam Inspection helps you clearly see structural or lining problems such as

Continued...

cracking, blistering, de-lamination or corrosion that is creating problems with fueling and potentially exposing you to a significant leak from your tank.

Sump Reconditioning and Repair

We perform testing, repair and reconditioning services for sumps, dispenser pans and spill buckets.

Cathodic Protection Services

We employ NACE-certified (National Association of Corrosion) engineers to design, survey and review complete cathodic protection systems for our customers. Our specially trained field staff provides equipment inspections, installations, repair and maintenance.

Automatic Tank Gauge (ATG) Installation, Certification and Service

Tanknology provides a full range of ATG services, including installation by manufacturer-certified technicians, system certification and operational verification, and ongoing maintenance and repair.

TANCS™

Tanknology Advanced Network for Compliance Services (TANCS) is the customer portal for access to all your data related to Tanknology compliance testing and services. TANCS is the most robust data access system for compliance testing services available anywhere.

TankClean™

Cleaning underground tanks without manned entry was once an imprecise process. How do you know it worked? Has everything possible been detached from the tank walls? Has all the debris and water been removed? Why did they create so much waste water? And what's the condition of your tank when the process is complete?

Tanknology's TankClean process answers all of these questions. It is a video-guided system which utilizes our proprietary TankCam® video inspection camera. The TankCam is placed inside the UST and remotely operated by a technician, providing a live clear view of the entire

cleaning process on a color monitor. By having this clear visual inside the tank, we only clean what actually needs to be cleaned.

Quality First

Tanknology's quality control and quality assurance program was implemented in early 2000 and is an essential element of our Quality Management System (QMS). We have done more than any company in the industry to ensure that our service personnel have the necessary qualifications, training, resources and oversight needed to do your job accurately and on time. Quality managers perform on-site inspections of all field staff, review test information and data files to verify the integrity of test results. Our Quality Management System Includes:

- A management structure designed to ensure maximum accountability for conforming to regulatory and technical requirements and customer expectations.
- Strict standards for employee performance and ethics.
- An extensive focus on continual improvement in all aspects of our business.
- Sophisticated, redundant analysis and review of test data.

Worldwide Capability Through International Licensees

Tanknology's international operations include more than 20 countries around the globe. Our licensees provide service to customers outside of the United States, and we continue to seek new partners in many areas of the world.

Tanknology licensees benefit from our worldwide reputation for technical and service leadership, which provides them with credibility and, in most cases, immediate customer prospects. We provide our licensees with all the necessary equipment, training, certification and support to be successful in their local markets.

To talk with us about worldwide licensee opportunities, please call 1 (512) 380-7129 or visit us at tanknology.com.
